Solar modules Now with GRAPHICS

Dansk Solenergi ApS can now present a revolutionary breakthrough with their patented innovation: CFR colored solar modules with GRAPHICS that exceed all previous limitations for solar modules. By virtue of the aesthetic, architectural and artistic possibilities that the colored solar modules represent, plans have been made for a completely new and highly energy-efficient architecture and art that knows no boundaries. All types of facades and roofs and much more can form an active element in the energy supply, while the architecture has a completely free hand, a symbiosis between technology and aesthetics of completely new and unimagined dimensions Advantage

The GRAPHICS World is a solar module, that's charge a battery at day time, for lighting the art in the evening and playing sounds.
